                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                mechanical properties of polysaccharide materials such as paper, yarns, fibers and textiles, using biological crosslinking agents. The polysaccharide containing materials have improved mechanical properties such as wet strengths, durability and elasticity. The PBD reagent is applied in the forming stage in fluting paper manufacture which eliminates the sizing step. The use of a biological crosslinker improves the recyclability of paper products. The PBD reagent maintains the fine fibers in a slurry therefore resulting in better recovery of raw materials. The PBD molecules are eluted by strong alkaline conditions which enhances the ability of the alkaline glue used in binding to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to methods and compositions for cross-linking and/or modifying the properties of polysaccharide materials. The method involves treating the polysaccharide structure with a polysaccharide binding domain (PBD) fusion protein. The method is used to alter the structural, chemical, physical, electrical and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (CBDT-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequ

                                                                                                                                                                                                                                                                                                                                                                       C AAQ72917/R63634 is a novel isolated cellulose binding domain. It pref. C binds crystalline with a Kd ranging from 1.5 microM - 0.5 microM, c pref. with a Kd of <1.2 microM, esp. <1.0 microM. The protein and C comprising the CBD and a second protein. The second protein is pref. C Protein A, heparinase, a hormone or an enzyme capable of degrading C an environmental pollutant, or an HSP, HSP antibody, cross-reactive MSP-related protein or an antigenic portion of this. The CBD and FP cellingues. CBD nucleic acid may be used in drug delivery, affinity sepns. and diagnostic techniques. CBD nucleic acid may be obtd. from a variety of cell cources that produce CBDs that bind with high affinity and in a reversible manner or that produce CBD encoding mRNA. The preferred or cource of CBD encoding nucleic acid is C. cellulovorans.
                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                 CDPA protein of Clostridium cellulovorans. The sequence is used the construction of a fusion protein which can be used in diagnostic immunoassays, e.g. to detect hear-shock proteins (HSP) and their cross-reactive proteins, antigenic fragments or HSP-specific antibodies (which indicate insulin-dependent diabetes mellitus, or susceptibility to it. The CBD, has very high affinity for cellulose (including crystalline forms) and chitin (dissociation constant 0.8-1.4 mu M), but has almost no cellulolytic or amorphogenic activities. The CBD binds over a wide pH range and is not released from cellulose by washing with water.
                                                                                                                                                  Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                               the cbpA procein of Clostridium cellulovorans. It was obtained by PCR amplification (see also AAX24952-3), and was used in the construction of binary vector pCCl, in which cbd was joined to the promoter and signal region of the novel endo-1.4-beta-glucanase cell gene (see AAX24923) of Arabidopsis thaliana. Expression of cbd in transgenic tobacco plants modulated their growth. The cell promoter can provide expression of any protein in elongating tissue. CBD is an example of a cell wall modulation transgene used to alter the structure or morphology of a plant. Transgenic plants of the invention may have altered biomass, growth, yield, greater or less resistance to biodegradation, be more or less digestible by ruminants, have altered cellulose content, larger or smaller leaves, etc., when compared to non-transgenic plants of the

The present invention relates to methods and compositions for cross-linking and/or modifying the properties of polysaccharide materials. The method involves treating the polysaccharide structure with a polysaccharide binding domain (PBD) fusion protein. The method is used to alter the structural, chemical, physical, electrical and mechanical properties of polysaccharide materials such as paper, yarns, fibers and textiles, using biological crosslinking agents. The polysaccharide containing materials have improved mechanical properties such as wet strengths, durability and elasticity. The PBD

The use of a biological crosslinker improves the recyclability of paper products. The PBD reagent maintains raw materials. The PBD molecules are eluted by strong alkaline conditions which enhances the ability of the alkaline glue used in binding to

                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to methods and compositions for cross-
CC linking and/or modifying the properties of polysaccharide materials.
CC The method involves treating the polysaccharide structure with a
CC polysaccharide binding domain (PBD) fusion protein. The method is
CC used to alter the structural, chemical, physical, electrical and
CC warns, fibers and textiles, using biological crosslinking agents.
CC The polysaccharide containing materials have improved mechanical
CC reagent is such as wet strengths, durability and elasticity. The PBD
CC which eliminates the sling step. The use of a biological crosslinker
CC improves the recyclability of paper products. The PBD reagent maintains
CC the fine fibers in a slurry therefore resulting in better recovery of
CC caw materials. The PBD molecules are eluted by strong alkaline conditions
CC center the paper.

                                                                                                                                                                                                                                                                      Renilla and Ptilosarcus green fluorescent protein (GFP) nucleic acids and C proteins. The luciferases and GFPs can be used in C bioluminescence-generating systems, assays, screening methods, diagnostic method and articles of manufacture. They can be expressed using e.g. bacterial, yeast, fungal, plant, insect or animal cells. The Renilla mullerl, Gaussia and Pleuromamma luciferase or Renilla or Ptilosarcus GFPs can be used in e.g. toys, cosmetics, fountains, personal care items, fairy dust, beverages, soft drinks, foods, textile products, bubbles, balloons, personal items, dentrifrices, soaps, body paints, bubble bath, ink or paper products. In particular, they can be used in e.g. squirt guns, finger paints, foot bags, greeting cards, slimy play material, clothing, bubble making toys, bath powders, cosmetics, body commendations, gells, body powders, body creams, toothpastes, mouthwashes, cospess, body paints, bubble bath, inks, wrapping paper, gelatins, icings, frostings, greeting cards, beer, wine, champagne, soft drinks, ice cubes, ice, dry ice or fountains. The nucleic acids can also be used to produce

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Qγ
The patent discloses sea pansy (Renilla reniformis) green fluorescent proteins (GFP) and their corresponding polynucleotides. The invention also relates to sequences of the bioluminescence generating system (e.g. luciferase). R. reniformis GFP are used in diagnostic methods and in the production of novelty items such as toys (e.g. squirt gun, pellet gun, toy "Halloween" eggs, toy cigarettes, board/card game toys, finger paints, slimy play material, bubbles in bubble making toys, fishing lures, dolls, sparklers, magic wand toys, balloons, personal care item (e.g. cosmetic, bath powders, body creams, tooth pastes, mouth wash, soaps, body paints, bubble bath), ornamental transgenic plants, fountain, fairy dust, food (gelatins, icings, frosting, beers, wine, champagne, milk, soft drinks, ice cubes, ice, dry ice, beverage), textile (foot bag, clothing) and/or paper product (greeting cards, wrapping paper). The present sequence is a DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Green fluorescent protein; GFP, bioluminescence generating system; luciferase; finger paint; slimy play material; fishing lure; sparkl doll; balloon; personal care item; cosmetic; bath powder; body crea tooth paste; mouth wash; soap; body paint; ornamental transgenic pl bubble bath; fountain; fairy dust; food; gelatin; icing; frosting; wine; champagne; milk; soft drink; ice cube; ice; foot bag; beverag dryice; textile; clothing; paper product; greeting card; wrapping

The present invention relates to methods and compositions for cross-CC linking and/or modifying the properties of polysaccharide materials. CC The method involves treating the polysaccharide structure with a CC polysaccharide binding domain (PBD) fusion protein. The method is CC mechanical properties of polysaccharide materials such as paper, CC pars, fibers and textiles, using biological crosslinking agents. CC The polysaccharide containing materials have improved mechanical properties such as wet strengths, durability and elasticity. The PBD CC reagent is applied in the forming stage in fluting paper manufacture which eliminates the sizing step. The use of a biological crosslinker CC improves the recyclability of paper products. The PBD reagent maintains CC raw materials. The PBD molecules are eluted by strong alkaline conditions on the constraints and conditions to the constraints and conditions to the constraints and conditions to the constraints and conditions to the constraints and conditions to the constraints and conditions to the constraints and conditions to the constraints and conditions to the constraints and conditions to the constraints and conditions to the conditions and conditions to the conditions are conditioned to the conditions and conditions to the conditions are conditions and conditions are conditions to the conditions are conditions and conditions are conditions.
                                                The present sequence is a DNA encoding Clostridium cellulovorans protein A-cellulose binding domain (ProtA-CBD). This sequence co a part of cbpA gene and a part of pRIT2T vector sequence.

                                                                                                                                                                                                                                                                                                       This invention relates to a method for the protection against infection of a polkilothermic fish by the bacterial pathogen, Piscirickettsia salmonis: The method comprises administering an immunogenic amount of a P. salmonis specific antigen termed OspA, or an immunogenic fragment of OspA in the form of a vaccine. The method is used for protecting animals, particularly polkilothermic fish, against the bacterial pathogen P. salmonis. The method is also useful for protecting against salmonid rickettsial septicaemia (SRS) and other rickettsial diseases. The present sequence represents a PCR primer used in the cloning and optimisation of the P. salmonis OspA gene. The OspA gene is used in the method of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Bates, MC3-3320 Houston,
                                    First strand cDNA was primed with an anchored XhoI-oligo(dT) primer [5'GGAGGACTCGAGGGGCGCAGGAGGAG(T)VN 3'; V=A,C,G; T] and then dG tailed. Second strand was primed with a BamHI-dC primer [5'AGAGAGCTCGCGCATAATAATACT(C) 3']. Double-stranded cDNA was then digested with BamHI and XhoI and directionally cloned into the BamHI and SalI sites of lambda pSB vector. Library went through one round of normalization. Library was constructed by Wei Yu at RIKEN of Japan (Carninci P, Westover A, Nishiyama Y, Ohsumi T, Itoh M, Nagaoka S, Sasakin, Okazaki Y, Muramatsu M, Schneider C, Hayashizaki Y, High efficiency selection of fullloath Chan but interced the first transcript the description of fullloath chan but interced to the contraction of fullloath chan be interced.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /note-"Organ: colon_ins; Vector: puc18; Site_1: SmaI; Site_2: SmaI, A mini-library was made by cloning products derived from ORESTES PCR (U.S. Letters Patent application No. 196,716 - Ludwig Institute for Cancer Research) profiles into the pUC 18 vector. Reverse transcription of tissue mRNA and cDNA amplification were performed under low stringency conditions."
                                 modified polylinker; lst strand cDNA was prepared from modified polylinker; lst strand cDNA was prepared from neuroendocrine lung carcinoid, and was then primed with a Not I - oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library is normalized, Library was
